

Dharmsinh Desai University
Data Structures
Tree Implementation and Traversals

Exercise:

- Create Python programs for the following.
- Create your programs in the VS Code with complete documentation.

1. Write a program to do the following operations.
 - a. Create a Binary Tree by collecting information from users.
 - b. Traverse the created trees using
 - i. preorder
 - ii. postorder
 - iii. inorder
2. Write a program to do the following operations.
 - a. Create a Binary Search Tree by collecting information from users.
 - b. Traverse the created trees using
 - i. Level order
 - c. Search Element in Binary Search Tree
3. Write a program to do the following operations.
 - a. Create an LIST from user input.
 - b. Search Element in an array using linear search - prints iteration done to find the element
 - c. Search Element in an array using binary search - prints iteration done to find the element
